

Calendered Vinyl

Calendered vinyls are engineered for smooth, flat surfaced applications. Adhesives are available in Permanent, Removable and High Tack adhesion grades, Vinyl thickness is measured in "mils" and are available in 3 mil, 3.75 mil, 4 mil and 6 mil thicknesses.

An **overlamine** is recommended for most vinyl applications.

Laminates provide abrasion protection, easier application and extend durability against outside elements and UV fade protection.

In some cases, a mild adhesive Transfer Tape may be recommended for unlaminated, calendered vinyl decals. Bubbles and wrinkles are very common results from applying unlaminated decals. The use of a transfer tape greatly increases a successful installation. Listed below are frequently used vinyls and their companion overlaminates.
